Completion Checklist

1 System Overview

The Black Raven Service Desk is a fully branded, self-hosted ticketing system built on Zammad. It integrates with your existing NinjaOne RMM platform and Microsoft 365 environment.

Access Model: Morpheus AI manages the server infrastructure (DigitalOcean droplet, Docker, SSL, backups). Black Raven IT manages the application configuration (users, groups, OAuth, email, NinjaOne policies) via the Zammad admin UI and their own dashboards. Black Raven does not have direct server/SSH access.

Component	Detail
Platform	Zammad (AGPL-3.0)
Hosting	DigitalOcean (dedicated droplet, 4 vCPU / 8 GB RAM)
Domain	support.blackravenit.com
Auth	Microsoft Entra ID (OAuth) + local fallback
Integration	NinjaOne RMM (auto-ticket creation, client onboarding)
Network Security	Tailscale (zero-trust mesh — pre-configured by Morpheus AI)
Managed by	Morpheus AI

2 Initial Admin Access

Use these credentials for first login. **Change the admin password immediately.**

Field	Value
URL	https://support.blackravenit.com (after DNS setup)
Staging URL	https://staging.blackraven.morpheusweb.dev (use this now)
Username	admin@blackravenit.com
Password	BlackRaven2024!
Role	Administrator

Additional Test Accounts

User	Email	Password	Role
Tech Lead	tech@blackravenit.com	TechLead2024!	Agent
Helpdesk	helpdesk@blackravenit.com	Helpdesk2024!	Agent

User	Email	Password	Role
Test Client	client@testcorp.com	TestClient2024!	Customer

Test Organizations

Organization	Domain	Type
Black Raven IT	blackravenit.com	Internal
TestCorp Industries	testcorp.com	Sample client
Acme Healthcare	acmehealthcare.com	Sample client

Important: Once Microsoft OAuth is configured (Section 6), users will sign in via "Sign in with Microsoft" and these local passwords become emergency fallbacks only.

3 Tailscale Setup (Secure Access)

Before testing, each team member who needs access must install Tailscale. This creates a secure, private network connection to the Service Desk server — no ports are exposed to the public internet.

What is Tailscale?

Tailscale is a zero-trust mesh VPN. It takes 2 minutes to set up and runs quietly in the background. Once connected, you can access the Service Desk as if you were on the same local network as the server.

Step-by-Step Setup (Per User)

- 1

Request access

Provide your Morpheus AI representative with the names and email addresses of team members who need access.
- 2

Morpheus AI approves and sends invite

Each approved user receives a Tailscale invite link via secure channel.
- 3

Download Tailscale

tailscale.com/download (Windows, Mac, iOS, Android available).
- 4

Install and sign in

Use your Microsoft account (same one you use for M365).
- 5

Click the invite link

This joins you to the Service Desk network.
- 6

Wait for approval

A Morpheus AI admin must approve your device before access is granted.
- 7

Verify connection

Tailscale icon in your system tray shows "Connected".

All Tailscale connections require Morpheus AI admin approval. This is a security measure — no device can access the server network without explicit authorization. Approval is typically completed within 1 business day.

Access is restricted to the Service Desk server only. Black Raven devices on Tailscale can only reach the blackraven-servicedesk machine. You will not have access to any other Morpheus infrastructure. This is enforced via Tailscale ACLs (access control lists) managed by Morpheus AI.

Who Needs Tailscale?

Role	Needs Tailscale?	When
Admins exploring the system (Section 4)	Yes	Before DNS is configured
Agents using the live system	No	After DNS + SSL are configured
MSP Clients submitting tickets	No	After DNS + SSL, access via support.blackravenit.com

4 Testing Before Full Setup

You can explore the full system **before** configuring DNS, Microsoft OAuth, or NinjaOne. This lets your team look around, test ticket workflows, and verify everything works.

How to Access

1. Ensure Tailscale is connected (Section 3)
2. Open your browser and go to: **<https://staging.blackraven.morpheusweb.dev>**
3. Log in with: **admin@blackravenit.com** / BlackRaven2024!

What You Can Test

Area	What to Try
Admin Dashboard	Explore settings, branding, groups, roles
Create Tickets	Submit test tickets, assign to agents, set priorities
Agent Workflow	Log in as tech@blackravenit.com — pick up and resolve tickets
Customer Portal	Log in as client@testcorp.com — submit a ticket as a customer
Search	Search tickets by keyword to verify Elasticsearch is working
Reporting	Check the built-in reporting dashboard
Custom Fields	Review the ninja_alert_id field (prep for NinjaOne)

What Won't Work Yet

Feature	Requires
https://support.blackravenit.com URL	DNS setup (Section 5) — currently accessible at https://staging.blackraven.morpheusweb.dev
"Sign in with Microsoft" button	Microsoft OAuth (Section 6)
Auto-ticket creation from alerts	NinjaOne integration (Section 7)
Auto-onboarding of MSP clients	NinjaOne integration (Section 7)
Email-based ticket submission	Email channel setup (Section 8)
SSL on support.blackravenit.com	DNS pointing to droplet (SSL auto-provisions once DNS is set)

Cleaning Up After Testing

Action	How	Why
Change admin password	Admin → Profile → Password	Default password is in this document
Delete test agent accounts	Admin → Users → delete tech@ and helpdesk@	Known passwords are a security risk
Delete test customer account	Admin → Users → delete client@testcorp.com	Not a real customer
Delete test organizations	Admin → Organizations → delete TestCorp and Acme	Keeps real client data clean
Delete test tickets	Admin → Tickets → delete any test tickets	Prevents confusion with real tickets
Keep "Black Raven IT" org	Do NOT delete	Used for agent accounts

Security Note: Zammad does NOT force password resets. If you skip cleanup, anyone with this document could log in using the test credentials. At minimum, change the admin password and delete test agent accounts before going live.

5 DNS Setup (Required — GoDaddy)

Skip this section until you're done testing (Section 4).

Your domain **blackravenit.com** is managed through GoDaddy. Add one DNS A record:

1. Log into GoDaddy DNS Management for **blackravenit.com**
2. Click **DNS** → **DNS Records**
3. Click **Add New Record**
4. Configure the record as shown in the table below
5. Click **Save**
6. Wait 5–30 minutes for DNS propagation
7. Verify: `nslookup support.blackravenit.com` should return the droplet IP

Field	Value
Type	A
Name	support
Value	104.131.85.152
TTL	600 (10 minutes)

Warning: Do NOT modify your existing MX, TXT (SPF/DKIM/DMARC), or root A records. Only add the new support subdomain record.

6 Microsoft Entra ID (OAuth) Setup

This allows your team and clients to sign in with their Microsoft accounts. Your Azure admin performs these steps.

Step 1: Register the Application

Go to **Azure Portal** → **App Registrations** and click **New registration**.

Field	Value
Name	Black Raven Service Desk
Supported account types	Accounts in this organizational directory only (single tenant)
Redirect URI (Web)	https://support.blackravenit.com/auth/microsoft_office365/callback

After registering, copy the **Application (client) ID** and **Directory (tenant) ID** from the overview page.

Step 2: Create a Client Secret

1. Go to **Certificates & secrets** → **Client secrets** → **New client secret**
2. Description: "Black Raven Service Desk" — Expires: **24 months**
3. Click **Add**
4. **Copy the Value immediately** — it is only shown once

Step 3: Configure API Permissions

Go to **API permissions** → **Add a permission** → **Microsoft Graph** → **Delegated permissions**. Add: openid, profile, email, User .Read. Then click **Grant admin consent**.

Step 4: Configure in Zammad

Go to **Admin** → **Settings** → **Security** → **Third Party Applications** → **Microsoft Office 365**.

Field	Value
App ID	[paste Application (client) ID]
App Secret	[paste client secret value]
App Tenant ID	[paste Directory (tenant) ID]

Secret Rotation Reminder: The client secret expires after 24 months. Set a calendar reminder to create a new secret in Azure and update it in Zammad Admin → Security → Third Party → Microsoft Office 365.

7 NinjaOne Integration Setup (Webhooks)

The Service Desk includes a webhook bridge that automatically creates tickets from NinjaOne alerts and onboards new MSP clients.

Step 1: Create NinjaOne API Application

Log into NinjaOne → **Administration** → **Apps** → **API** → **Add** → **Client App IDs**.

Field	Value
Application Name	Black Raven Service Desk
Grant Type	Client Credentials
Scopes	Monitoring (read), Management (create/modify)

Save and copy the **Client ID** and **Client Secret**.

Step 2: Configure Webhook

Go to NinjaOne → **Administration** → **Notification Channels** → **Add** → **Webhook**.

Field	Value
Name	Black Raven Service Desk
URL	https://support.blackravenit.com/api/ninja-webhook
Events	Alert Triggered, Alert Resolved, Organization Created

Step 3: Provide Credentials to Morpheus AI

Send the following to your Morpheus AI contact via secure channel (NOT email): NinjaOne Client ID · NinjaOne Client Secret · NinjaOne Instance URL (e.g. app.ninjarmm.com). Morpheus AI will configure these on the server.

How Auto-Onboarding Works

```
New Client in NinjaOne
→ Webhook fires to Service Desk
→ Organization automatically created in Zammad
→ Primary contact gets a customer account
→ Welcome email sent with login instructions
→ Client can submit tickets at support.blackravenit.com
```

How Alert-to-Ticket Works

NinjaOne Alert (e.g., disk space warning)

- Webhook fires to Service Desk
- Ticket auto-created with alert details
- Assigned to appropriate group (Helpdesk, Network, Security, Cloud)
- Priority mapped: critical→High, warning→Normal, info→Low
- When ticket is closed in Zammad, alert is resolved in NinjaOne

8 Email Channel Setup

Configure email so customers can submit and reply to tickets via email.

Recommended Setup

1. Create a dedicated Microsoft 365 mailbox: **support@blackravenit.com**
2. In the Service Desk, go to **Admin** → **Channels** → **Email** → **Add Email Account**
3. Configure using the table below
4. Follow the Microsoft OAuth flow to authenticate the mailbox

Setting	Value
Email address	support@blackravenit.com
Channel	Microsoft 365
Organization	Black Raven IT
Group	Helpdesk

Email Branding Settings

Setting	Location in Zammad
Product name	Admin → Settings → Branding → Product Name
Email signatures	Admin → Channels → Email → Signatures
Notification templates	Admin → Settings → Ticket → Email Notifications

9 How Client Access Works

For Your Internal Staff (Agents)

1. Visit <https://support.blackravenit.com>
2. Click "**Sign in with Microsoft**" (once OAuth is configured)
3. Authenticate via Microsoft → Dashboard loads
4. Assign roles in **Admin** → **Users** (Agent, Admin)

For MSP Clients (Customers)

Method	How It Works
NinjaOne Auto-Onboard	When added in NinjaOne, customer gets welcome email with login link

Method	How It Works
Admin Creates Manually	Admin → Users → Add Customer → Zammad sends password setup email
Self-Registration	Customer clicks "Register as a new customer" on login page

Customer Portal Features

- ✓ Submit new tickets (via web portal or email)
- ✓ View their ticket history and status
- ✓ Reply to tickets and add attachments
- ✓ Receive email notifications on ticket updates

10 Server Patching & Monitoring via NinjaOne RMM

This section covers managing the Service Desk **server itself** via NinjaOne RMM. Section 7 covers the webhook integration for alerts and client onboarding — these are separate.

Responsibilities at a Glance

Action	Who	How
Install NinjaOne agent on droplet	Morpheus AI	Black Raven provides agent installer/token
Install Tailscale on droplet	Morpheus AI	Connects droplet to secure mesh network
Add server to NinjaOne org	Black Raven IT	Via NinjaOne dashboard (once agent checks in)
Configure monitoring policies	Black Raven IT	Via NinjaOne dashboard
Configure patch policies	Black Raven IT	Via NinjaOne dashboard
Apply Docker/Zammad updates	Morpheus AI	Coordinated with Black Raven approval
Rollback if update fails	Morpheus AI	Image tags pinned, backup taken before every update

Why Tailscale? The NinjaOne RMM agent has full script execution capability on any server it's installed on. Since this droplet is Morpheus-managed infrastructure, Tailscale ensures all management access goes through a zero-trust boundary. Black Raven gets monitoring visibility; Morpheus retains infrastructure control. **No action required from Black Raven** — Tailscale is pre-installed and configured during droplet provisioning.

Recommended Monitoring Thresholds

Monitor	Threshold	Alert Level
CPU Usage	> 80% for 5 min	Warning
RAM Usage	> 85% for 5 min	Warning
Disk Space	< 20% free	Critical
Docker Services	Any container unhealthy	Critical
SSL Certificate	< 30 days to expiry	Warning

Set patch policies to notify only (not auto-apply). Morpheus AI coordinates all server-side changes to prevent disruption.

Update Procedure

Update Type	Black Raven Action	Morpheus AI Action
Ubuntu security patches	Review alert in NinjaOne	Apply patch in maintenance window
Ubuntu feature updates	Approve in NinjaOne	Stage → test → apply
Zammad new version	Notified via NinjaOne alert	Pull image → test staging → apply production
Critical Zammad CVE	Notified (high priority)	Immediate staging test → apply same day

11 Support & Maintenance

Item	Detail
Managed by	Morpheus AI
Contact	Your Morpheus AI representative
Backups	Daily automated to DigitalOcean Spaces (30-day retention)
SSL	Let's Encrypt auto-renewing certificates
Monitoring	DigitalOcean built-in alerts + NinjaOne RMM
Uptime SLA	Best-effort (discuss SLA terms if required)

Completion Checklist

	Task	Owner
☐	Droplet provisioned + Tailscale installed	Morpheus AI
☐	Black Raven team explores system via IP	Black Raven IT
☐	Test accounts + orgs cleaned up	Black Raven IT (Service Desk Admin)
☐	Admin password changed	Black Raven IT
☐	DNS A record added	Black Raven IT (GoDaddy)
☐	SSL certificate provisioned	Morpheus AI
☐	Microsoft OAuth registered in Azure	Black Raven IT (Azure Admin)
☐	Microsoft OAuth configured in Zammad	Black Raven IT (Service Desk Admin)
☐	NinjaOne API credentials provided	Black Raven IT
☐	NinjaOne webhook configured	Black Raven IT (NinjaOne Admin)
☐	NinjaOne bridge activated on server	Morpheus AI
☐	Email channel configured	Black Raven IT (Service Desk Admin)
☐	Test ticket submitted	Black Raven IT
☐	NinjaOne enrollment token provided	Black Raven IT
☐	NinjaOne agent installed on droplet	Morpheus AI
☐	NinjaOne monitoring policies configured	Black Raven IT (NinjaOne Admin)
